Windows 11 Virtualization and Command-Line Fundamentals

Omar Khalil | Portland Community College | CIS 140M

Guided academic lab • Entry-Level IT Support Portfolio

Overview

Set up and explored Windows 11 in a Hyper-V virtual machine and practiced foundational Command Prompt tasks.

Tools and environment

Hyper-V Manager, Windows 11, XtremeLabs, Command Prompt

Work demonstrated

- Windows 11 virtual machine installation and system information
- Hyper-V Manager checkpoints and applying a checkpoint
- Command Prompt navigation using `cd` and directory listings
- Filtering file listings with wildcards, creating folders and viewing text output
- Reviewing Windows licensing and version information

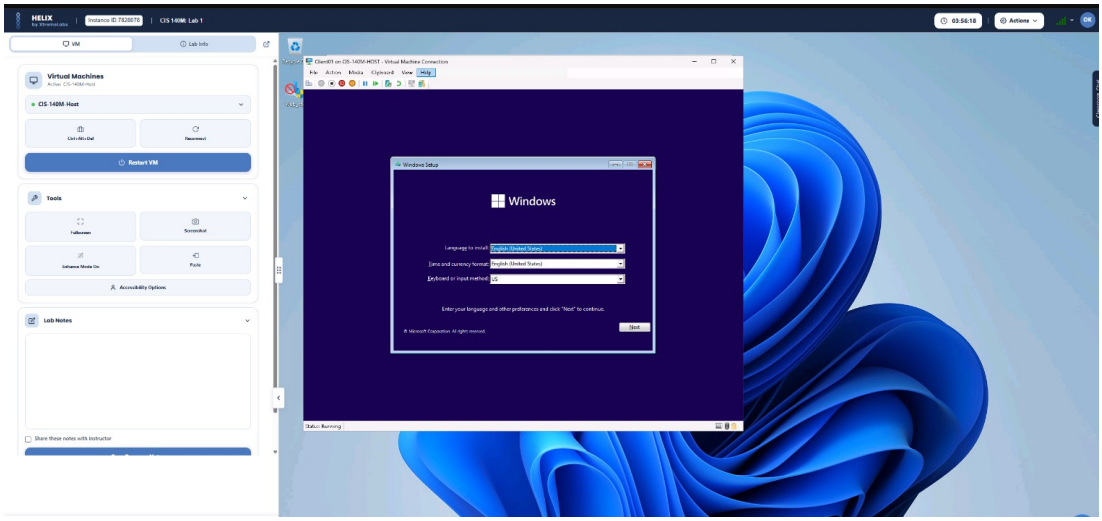

Relevance to IT support

This coursework demonstrates familiarity with Windows administration interfaces, following technical procedures, documenting results, and basic troubleshooting concepts used in entry-level Help Desk and Desktop Support roles.

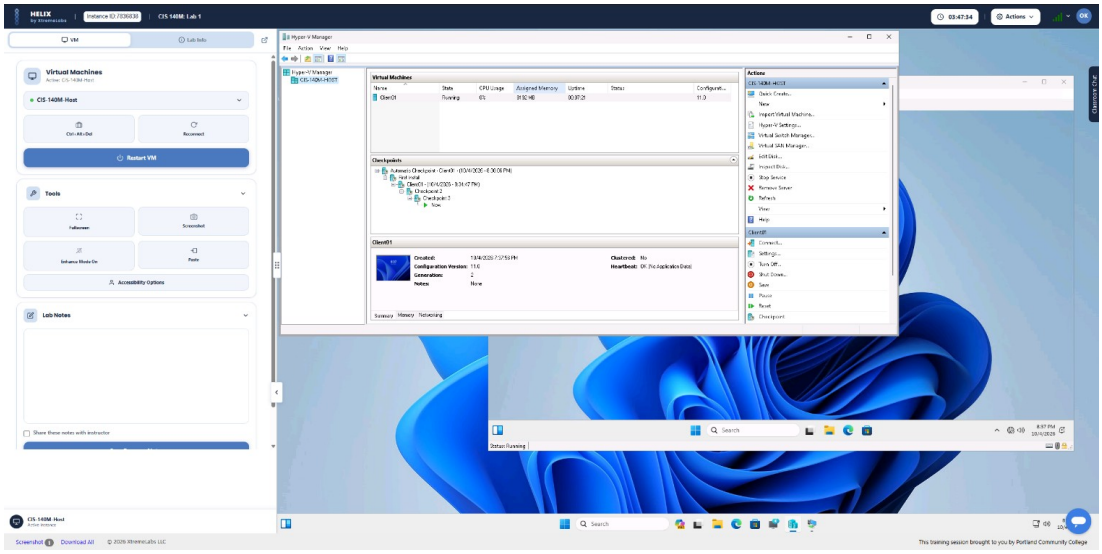

Selected Lab Screenshots

Screenshots captured during the guided virtual lab. Original XtremeLabs interface is visible in some images.
