Windows System Performance and Maintenance

Omar Khalil | Portland Community College | CIS 140M

Guided academic lab • Entry-Level IT Support Portfolio

Overview

Practiced Windows system maintenance and monitoring tasks in a guided virtual lab.

Tools and environment

Windows 11, Task Manager, Disk Cleanup, Resource Monitor, XtremeLabs

Work demonstrated

- Examining Windows Update Delivery Optimization settings and tradeoffs
- Inspecting and ending a test application using Task Manager
- Reviewing process details and storage usage
- Estimating reclaimable disk space using Disk Cleanup (584 MB in the lab)
- Reviewing advanced power settings and Resource Monitor

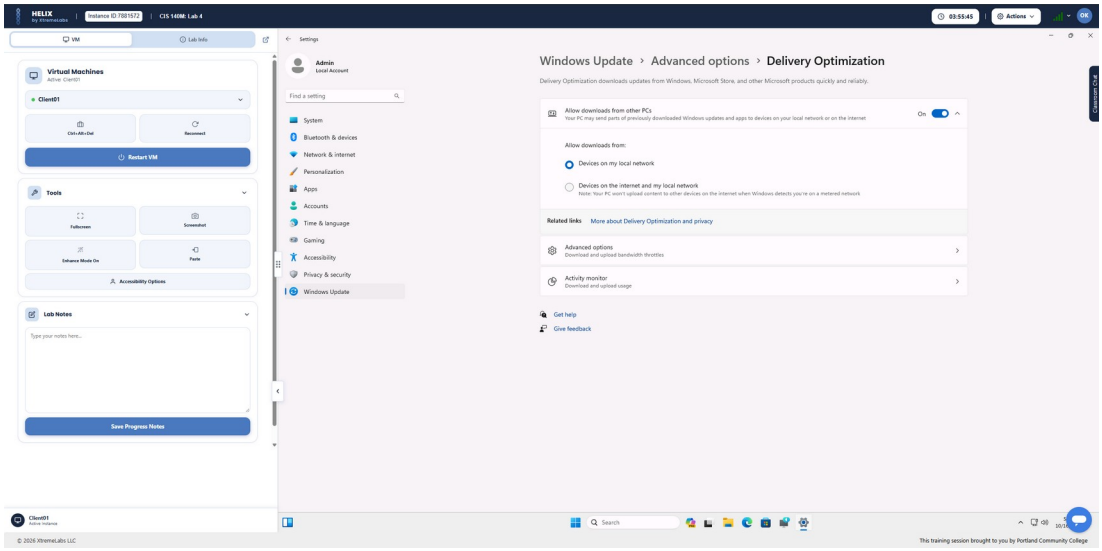

Relevance to IT support

This coursework demonstrates familiarity with Windows administration interfaces, following technical procedures, documenting results, and basic troubleshooting concepts used in entry-level Help Desk and Desktop Support roles.

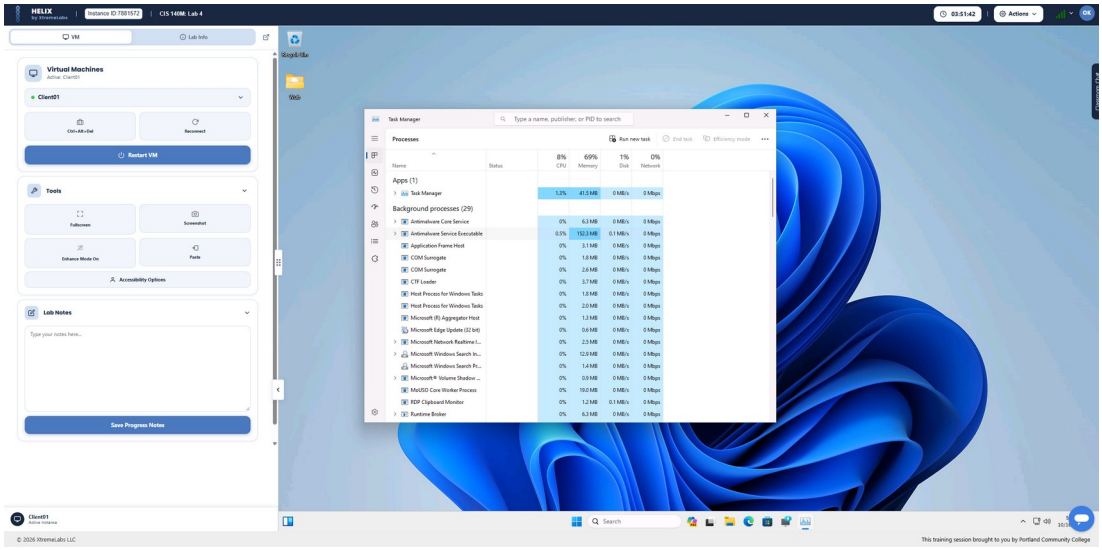

Selected Lab Screenshots

Screenshots captured during the guided virtual lab. Original XtremeLabs interface is visible in some images.
