Windows Hardware & Disk Management

Technical Lab Portfolio | Omar Khalil | CIS 140M · Portland Community College

Project overview

A guided Windows 11 administration lab in the XtremeLabs environment, covering disk preparation, drive checking, storage analysis, optimization, and device status inspection. This portfolio summary is based on the CIS 140M Lab 3 coursework.

Tools and skills

Windows 11 virtual lab · Disk Management · Optimize Drives · Command Prompt · Disk checking · Windows Storage settings · Device Manager · Screenshot documentation

Work demonstrated

• Inspected and prepared a disk in Windows Disk Management, including verifying its basic disk configuration.

• Checked drive health and interpreted disk scan results, including whether bad sectors were detected.

• Reviewed Optimize Drives status and explained when drive optimization may be useful.

• Used Windows Storage settings to report total, used, and free space on the C: drive.

• Inspected hardware and driver information in Device Manager, including device status and driver version.

Relevance to IT support

These guided tasks demonstrate foundational Windows troubleshooting, storage maintenance, device inspection, and technical documentation relevant to entry-level Help Desk and Desktop Support roles.

Note

This is a concise portfolio summary, not a page-for-page conversion of the previously uploaded Word portfolio document. The original portfolio Word file was not available in the current workspace.
